DETAILED ACTION

Claim Objections

1. Claim 13-17 are objected to because of the following informalities: claim 13, line 1, "system" should be replaced by "transmitter" to provide antecedent basis for recitation in claim 14, line 1, claim 15, lines 1-2, claim 16, line 1, and claim 17, lines 1-2. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1, 3, 11, 12, 16 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "sufficient" in the above claims is a relative term which renders the claim indefinite. The term "sufficient" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art fig. 5 in view of applicant's background of the invention page 3, lines 21-22.

Applicant's fig. 5 teaches a frame formatting method having the steps of filling a fixed length master frame with a plurality of variable length frames with each of a plurality of variable frames introduced by a sync pattern see fig. 5 and filling any unused portions with a fixed data pattern. However, applicant's admitted fig. 5 does not teach the unused portion of the master frame is filling with random data to increase randomness in said master frame. In the background of the invention page 3, lines 21-22, applicant's admitted that as well known in the art, system efficiency is maximized in a system which transmit modulated signals by maximizing the randomness of the signal to be transmitted. Given that fact, it would have been obvious to one skill in the art at the time of the invention to modify fig. 5, by replacing the fixed data by random data in order to maximize system efficiency.

As per claims 4, fig. 1 shows a sampler/digitizer and encoder.

Allowable Subject Matter

6. Claims 1, 3, 11, 12, 16 and 17 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

7. Claims 5-10, 13-15 and 18-19 allowed. However, the claims need to be amended if necessary to overcome the claim objection sets forth above.
